

Google Guice and Domain Model Pattern for a Reasonable API

Summary

In order to separate the domain objects from the persistence model in Mizura, I'm looking for ways to create a reasonable API for general purpose.

So I am searching for things like dependency injection and design patterns.

Below, some relevant information of this research:

Domain Model Pattern and related:

- <http://www.castle-cadenza.demon.co.uk/wrapper.htm>
- <http://c2.com/cgi/wiki?DecoratorPattern>
- <http://www.codeproject.com/KB/architecture/WrapperPatternSLWPF.aspx>
- <http://msdn.microsoft.com/en-us/magazine/ee236415.aspx>
- <http://martinfowler.com/books.html#eaa>
- file:///D:/DATA/DOWNLOADS_AND_FILES/ebooks/Patterns/Patterns%20of%20Enterprise%20Application%20Architecture,%20Martin%20Fowler/domainModel.html (local, sorry 😞)

Guice:
